## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 20-24,26,29 and 30 are rejected under 35 U.S.C. 102(e) as being anticipated by Amagi (US 6,144,102).

Amagi (Fig 3, 9) discloses an assembly, comprising: a polyimide film (3; Col. 2, Lines 36-64) including a plurality of substrate units (Col. 7, Lines 8-13) with said plurality of substrate units being electrically interfaced (via wires) with a plurality of dies (1; Fig., 3), each one of said substrate units including a substantially central cavity (4) adapted to receive wires (9) from a corresponding die which connect to a first surface (top) of said film, said dies being attached to a second surface (bottom) of said film with said second surface being opposed to said first surface; and a carrier (21) in mechanical communication with said first surface of said film for providing enhanced rigidity to said film by being sized and configured to add material at selected regions of said film; wherein said plurality of substrate units are grouped into substrate sets (Fig 9; via first three opening defining chip regions from three substrate units; wherein said carrier further comprises a plurality of cross bars (21a) and wherein each cross bar is located near a

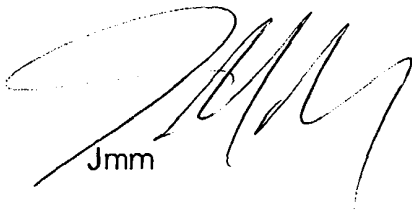

substrate set; and said plurality of dies comprise lead-over-chips (LOC; Fig 2); said plurality of substrate units includes a pair of adhesive tabs (8); wherein each one of said plurality of substrate units includes a plurality of alignment holes (not labeled; Fig 3).
